It couldn't be simpler!

It couldn't get any cheaper!

For NOK 55.00 per day for 10 years, you can have automatic feeding of fodder and concentrates. An excellent feeding system for those thinking about renovating an old barn. It is just as suitable whether the barns have stalls or pens. In the case of pens it is important to have such a large truck that all the animals in the pen can feed at the same time, thereby avoiding fighting and pushing when the truck comes.

Recommendations:

Programme the truck to operate all day with fodder, experience shows that the animals feed when they are hungry and rest when they need to, and therefore they do not appear stressed when the truck is in operation.

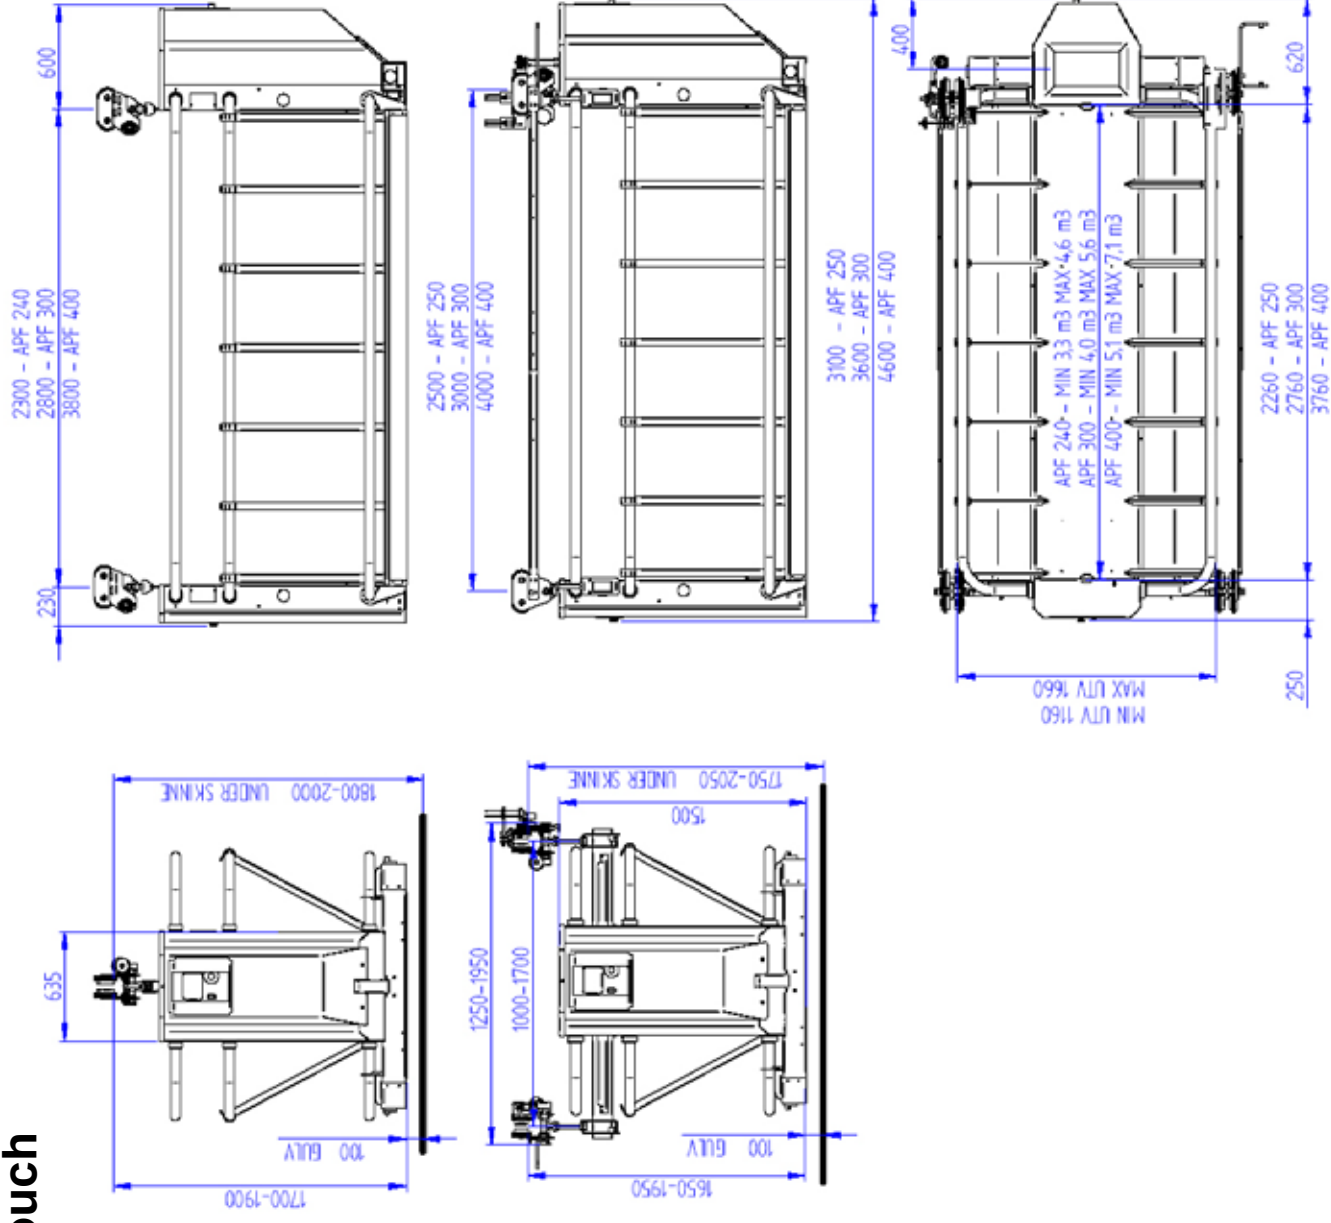

Concerning concentrates, the truck should be operated four or more times in order to gain any benefit from this portioning. Since there is also a possibility of adjustment up and down of concentrates, there is an opportunity to optimise this as much as possible.

APF Touch can be mounted on both single and double tracks, but in barns with a combination of cows/bulls, or only bulls, we recommend a double track because bulls have a tendency to "harry" the truck. It will hang steady on a double track.

APF can be used for all types of feed, whether it is laying whole round bales in it or using it for complete feed

Målskisse APF Touch

Better feeding room for the cows

- With the angled struts the cows have better room for their heads and can therefore reach the feed better.

Less feed spill

- If the cow pulls the feed loose it will not fall on the floor as easily, but will remain on the edge of the truck.

Concentrates tank integrated in the construction

- The tank is a part of the steel construction. The animals cannot gnaw holes.

Simpler installation in tight places

- The truck is delivered as a flatpack and is simpler to get into the barn and simple to install.

Simpler maintenance of screws and engines

- It is simpler to get to the single components to make maintenance easier.

Appetite feeding truck APF Touch

The truck is adjustable in width, the bottom can be adjusted from 116 cm up to 166 cm. Electric power is either 230 V 1 Phase or battery driven (24 V). Delivered as a flatpack with precise assembly instructions, which make it easy to carry the whole truck into the barn and then install it directly on the tray feeder.

APF Touch can be equipped with two tanks for concentrates, one at each end of the truck. There is also an up and down adjustment on both tanks. It is possible to run 12 portions of concentrates every 24 hours, which is very advantageous for the animals.

The use of the APF truck gives exact portioning of concentrates, which means that most people use less concentrates.

New touch display

- Simpler operation. Excellent overview with more information on the screen
- Simplifies start-up for the user
- Short-cut keys on the screen
- Forward/back keys at both ends of the truck
